

SCIENCE

HIGHLIGHTS

Preface

This year we have a new approach to presenting the science highlights in the NSLS Activity Report. The material is organized by research field rather than by technique, with the hope of making the document more accessible to the non-expert in synchrotron science. We would like to acknowledge the specific contributions to the text that follows. The liquid surfaces discussion was prepared by M. Deutsch (Bar-Ilan U.), P.S. Pershan (Harvard U.), and B. Ocko (BNL-Physics), the inelastic x-ray scattering by C.-C. Kao (NSLS), and the nuclear physics section by B. Freedom (U. of South Carolina). Important contributions to several sections have been made by L.E. Berman, G.L. Carr (NSLS), M. R. Chance (Albert Einstein College of Medicine), M. Dudley (SUNY @ Stony Brook), L. Furenlid, S. Hulbert, M.L. Shek-Stefan, D.P. Siddons, P. Stephens (NSLS), M. Vaughan, D. Weidner (SUNY @ Stony Brook), and G.P. Williams (NSLS). Without their efforts this document would not be possible.
